

## Multi V-belt kits for mild-hybrid models

Belt-driven starter-generators (BSG), such as the 48V Eco Drive system from Continental, achieve fuel savings of up to 15% in many modern hybrid drive systems, resulting in a corresponding cut in CO<sub>2</sub> emissions. To ensure this continues to be the case following replacement of the belt, special belts are required that are capable of withstanding the specific operating demands of hybrid drive systems.

This is why we now offer special multi V-belt kits for mild-hybrid models. These kits contain both the multi V-belt itself and the tensioning elements that are customary on such drive systems, providing mechanics with everything required for carrying out repairs to hybrid vehicles with BSG systems safely and efficiently. The full range together with useful additional information can be found in the Product Information Center (PIC).

### Contents

- > Multi V-belt
- > Tensioning elements

### Benefits

- > All parts required are instantly to hand
- > Durable quality
- > 5-year guarantee:
